

Values of the GSNW Index compared with predictions (1966 to 2011) of the model of Taylor and Gangopadhyay (J. Geophys. Res., 106, C7, 13849-13860, 2001). The calculation used the parameter values in this paper, with a 2 km surface layer and a one year delay in the NAO index. The model predicts a southerly position during 2011.
